EDUCATION
Royal Institute of Technology (KTH)
Masters degree in Computer Science
2011 - 2016
4.5 / 5 ECTS grade average
Specialization in Human-Computer Interaction
Exchange studies at Korea Advanced Institute of Science and Technology (KAIST)

EXPERIENCE
5 Monkeys Agency | Frontend Developer
2015
I worked with developing hybrid Android and iOS apps, using AngularJS, HTLM/CSS, Ionic and Cordova.

We Know IT | Web Developer
2014-2015
I provided services for various companies as a consultant, developing websites using PHP and Wordpress. My responsibilities also included large amounts of client communication and drafting specifications.

Vetenskapens Hus | Lab Teacher
2014
I conducted lab sessions for classes with up to 30 students, in technology related areas such as network security or computer hardware.

Freelance Consultant | Java/C++ Developer
2012
I worked as a consultant for a project which involved low level ASIO drivers and real time audio analysis. My job assignments included both developing audio features for the C++ backend and improving the Java GUI.

PORTFOLIO
Cheddar for Hacker News | Android Developer
2015
Cheddar is a lightweight and minimalist reader for Hacker News, a site for hackers and developers to discuss technology related news. Featured by XDA-Developers, writing "Well-designed social news readers of this caliber do not come very often".

Materialist | Android Developer
2015
Materialist is a lightweight to-do list for Android, used for managing tasks. It uses Material Design, and is designed to provide a minimalist and intuitive experience.

QWait | Frontend Developer
2014
QWait is a responsive, web-based queueing system used for lab sessions at KTH by students and teachers in over 40 courses. My responsibilities included frontend development using HTML and AngularJS, and user experience design.

The rest of my projects can be seen at either **github.com/adrianblp** or **adrianblan.co**
